Research Skills T:
Logical Thinking Skills in the Age of AI

Why take this course?

Imagine you and other students ask Chat GPT to write a paper on the same topic. All the papers turn out almost identical. So, where is your originality?

In the age of AI, anyone can generate sentences, but not everyone can generate thought. This course helps you build genuine originality by moving beyond AI-generated writing and cultivating the logical and critical reasoning skills that define human intelligence.

What will you learn?

- Develop an original idea that significantly distinguishes your research from others.

- Construct a logically convincing argument based on the research idea developed.

- Understand how to prove and defend the research idea effectively.

- Learn how to use AI tools responsibly while maintaining authorship.

Class style

- Face to face.

- Team-based learning: small group collaboration through active discussions.

- Hands-on workshops centered on your research.

- Individual tutorials for in-depth research development.
